

Dear Builders & Owner Builders,

Please find an information sheet and checklist that will assist in the application of your floor. Items with a checkbox next to them must be addressed.

Non-negotiable items

We must have :

- easy access to electricity outlets and;
- have sufficient lighting, even if work is carried out during the day and;
- easy access to running water.

The area must be at 'lock up' stage or similar. *Note: Damage to the floor done by others is not covered under our warranty. Rectification works will likely be charged to the client.*

Negotiable items

We may require a small skip or bin for rubbish removal. We will advise prior to attending if this is required.

Painters

Painters and plasterers need to keep the floor as clean as possible. They are not to overspray onto the floor or leave excessive paint.

Skirting

Skirting / kickboards are to be removed (or not installed). This is so we can get a clean finish. If this isn't possible, we may need to have a painter touch up the edges after we install the floor.

Duration of flooring works

AAA Sexy Floors need 4-5 days to complete the work. No other trades will be allowed on site at that time. After this time, minimal access will be permitted as the floor will take a further two days to cure.

Floor protection

Please cover and protect floor if trades are working after the floor has been complete. *Note: Damage to the floor done by others is not covered under our warranty. Rectification works will likely be charged to the client.*

Final inspection and warranty

Upon completion, you will be given a final inspection certificate to sign. Once the full and final payment has been received, your floor warranty will be activated.

Further information

If you have a concern or any information you think might be important to assist in laying the floor, please don't hesitate to contact us. No question is too small or too silly.

Flooring extras (not applicable to all jobs)

Going over tiles

SEXY EPOXY

Designer Floors
With A Difference

Even though we will check the existing tiles prior to applying the floor, it is your responsibility to ensure they are structurally sound. If some tiles are damaged or drummy they must be removed prior to us attending site.

Non Slip and Patios UV light exposed areas.

Patios exposed outside areas to weather and UV rays must have Polyurethane non slip R10.

Cement sheeting

Please advise us special check list.

Coving

Please advise if coving is required in whole or part

Anything we should know about your build?

Please don't hesitate in contacting us anytime.

Kind Regards
